OBJECTIVE

Aspiring programmer, self-taught I started programming a short while ago and already know HTML, CSS, JavaScript, Node, Express, Angular 2+, MongoDB, and MySQL. Below I have listed a few projects that I have made for you to view at your leisure. I have a strong desire to learn and grow, and I am committed to making myself a better programmer

EDUCATION

University of Phoenix, Phoenix, AZ

I am currently in attendance at the University getting my bachelor's degree in Software Engineering. Where I have learned languages like python and Java

KEY SKILLS

HTML, JavaScript, Java, CSS, Node, Express, MongoDB, MySQL, jQuery

EXPERIENCE

JavaScript

This is used in most of my websites, from a simple loader on my profile page to a simple JavaScript game call The Great RGB Game https://profile-cwilliams.herokuapp.com/views/rgb

Angular 2+

The main project that I have done with this is going to be my Recipe Book. It successful merges different components and services to render one single page web application, added with a backend database, and some user Authentication. https://recipeproject-cded0.firebaseapp.com/recipes

Node & Express

These two languages are what I use to publish all of my web pages, and this also work extremely well with the Angular CLI to view a full list of some of my Web pages here https://profile-cwilliams.herokuapp.com/

Completed a 50 hour Web Developer Bootcamp, along with an 80 hour Angular 8 Master Class, I intend to keep completing these courses to become an ever more competent programmer

Leadership

Leadership is understanding that first I must lead myself and learn how to follow my leaders. That understanding has had me in acting roles as management with previous employers, along with being an officer of Toastmasters and responsible for the what goes on in the chapter.
